# What We Set Out to Understand

Four analytical lenses frame this study of Netflix's content decisions over 13 years.

1

## Content Strategy

Map how Netflix allocates investment across formats and genres.

2

## Distribution

Break down the share of movies vs. TV shows in the catalog.

3

## Trend Analysis

Identify inflection points in content production over time.

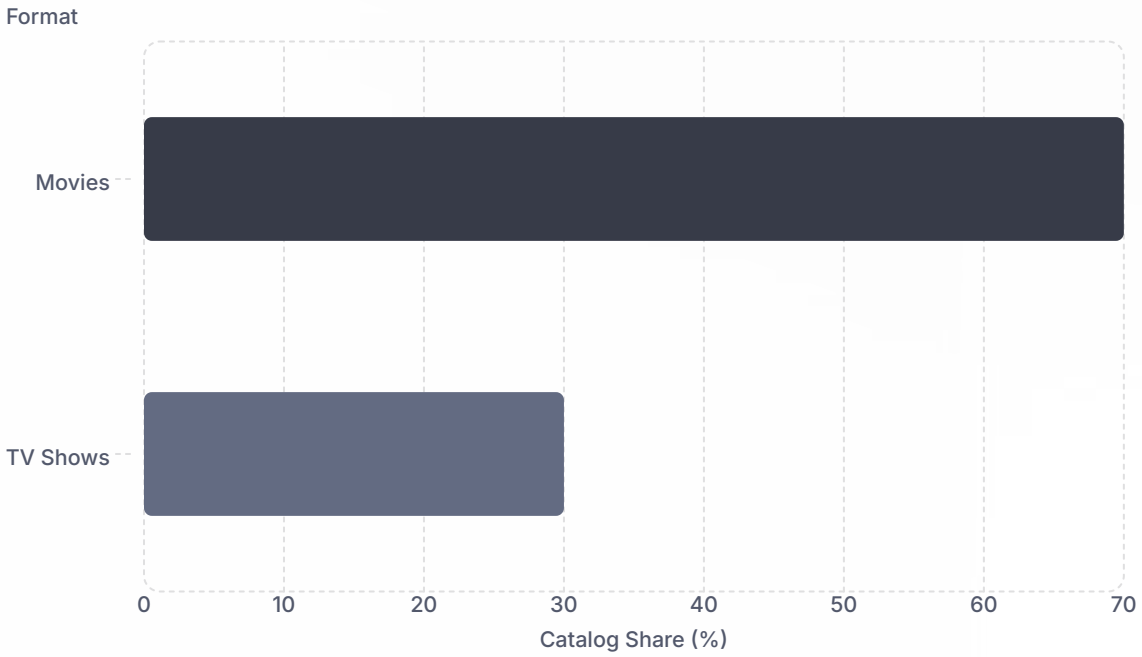
4

## Global Expansion

Evaluate how content sourcing diversified across international markets.

Made with GAMMA

# Content Distribution: Movies Lead, TV Follows



## ~70% Movies

Movies anchor the catalog, offering lower production costs and broader licensing flexibility — a scalable foundation for global rollout.

## ~30% TV Shows

TV shows drive subscriber retention through episodic engagement, despite higher per-title investment.

The 70/30 split reflects a deliberate strategy: movies for scale, TV for loyalty.

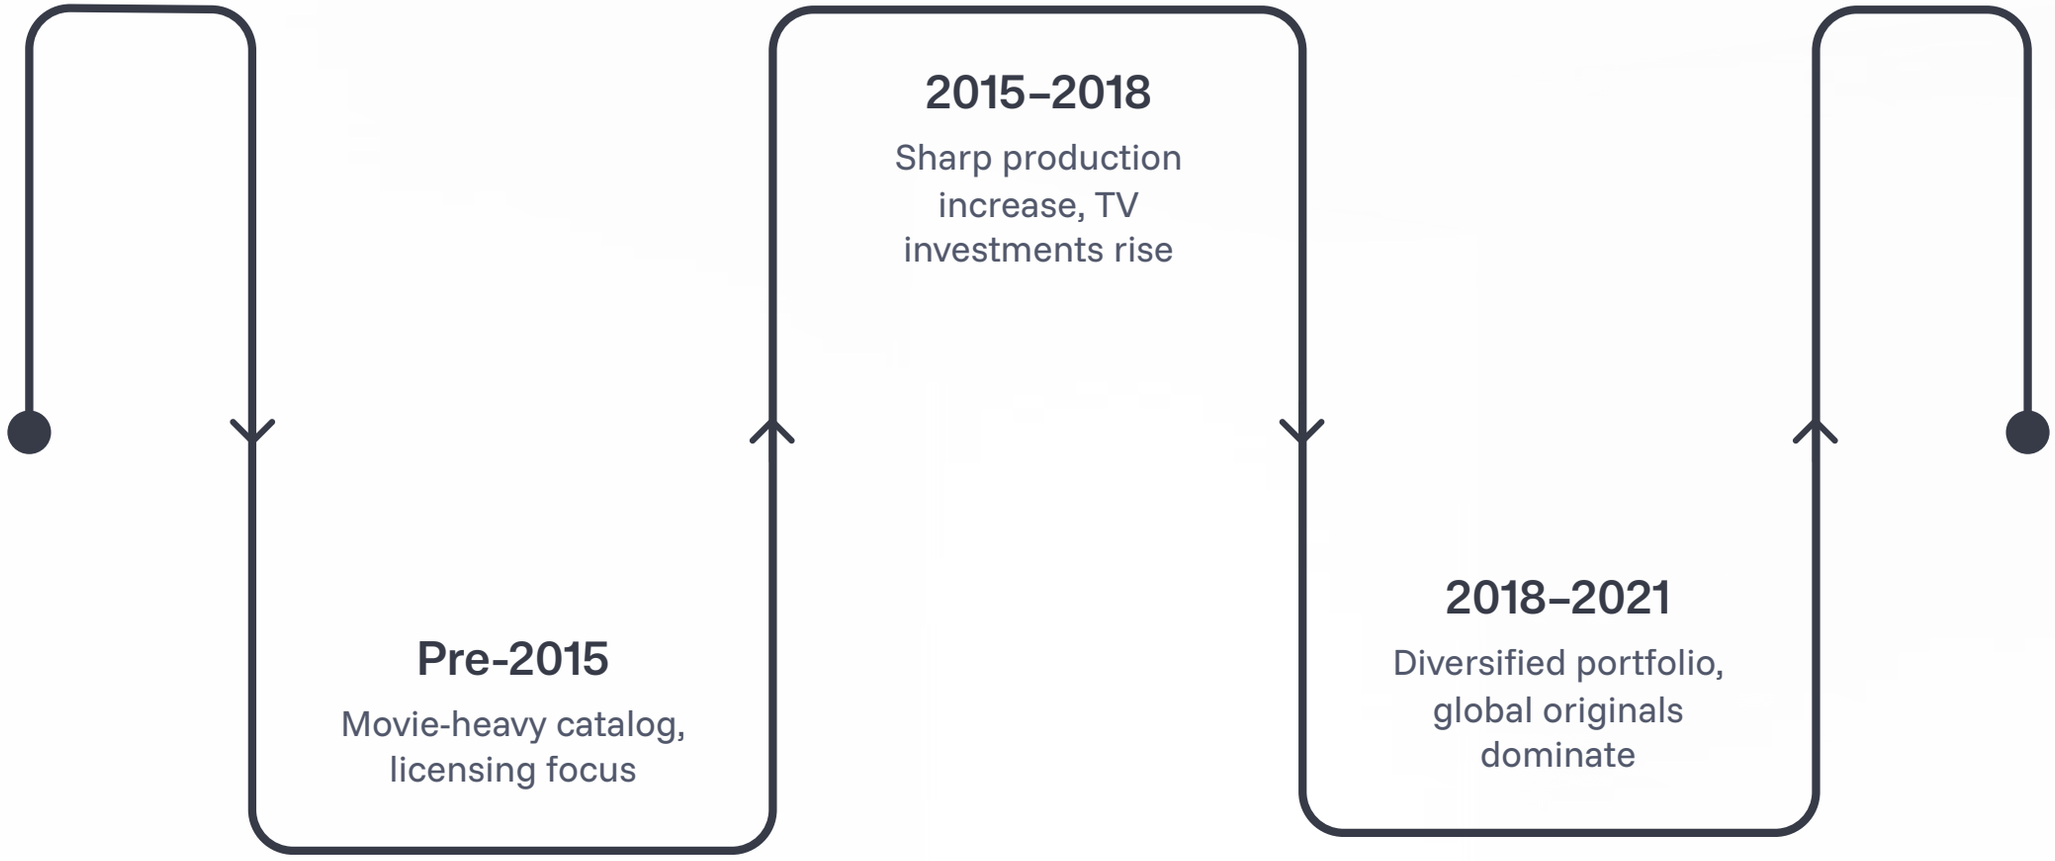
# The 2015 Inflection Point

Content production accelerated sharply after 2015, with TV shows leading the surge — signaling a strategic pivot toward episodic, binge-worthy originals.



This three-phase arc shows how Netflix moved from licensing films to commissioning original series at scale.

Made with GAMMA

# Genre Strategy: Mass Appeal First

### Drama

Highest-volume genre globally — emotionally resonant across cultures and demographics.

### Comedy

Strong retention driver; low production cost with broad cross-market appeal.

### Action

Universal language genre — minimal localization needed, maximum global reach.

### International

Growing presence of non-English content signals deliberate localization investment.

# Global Expansion: Beyond Hollywood

## USA Still Leads

The United States remains the primary content source, but its relative share has declined as Netflix invests in local production hubs worldwide.

## Key Growth Markets

- **India** — High-volume local originals and Bollywood licensing
- **South Korea** — Premium K-dramas with global breakout potential
- **Japan** — Anime and local genre content for Asian markets

# Key Takeaways

## From Movies to a Balanced Portfolio

Netflix evolved from a movie-heavy library to a diversified mix — leveraging TV shows for retention and originals for differentiation.

## Scalability + Experimentation

The 70/30 movie-to-TV ratio reflects a dual mandate: scale through licensing, loyalty through originals.

## Global Content Is the Next Frontier

Investment in India, South Korea, and Japan signals that future growth depends on local production — not just global distribution.
